

Agentic AI-driven DataOps, with unified observability at the core

Transform reactive data operations into autonomous intelligent workflows—powered by Impetus Prism™

25–30%

cloud cost reduction

50%

faster release cycles

50%

quicker incident resolution

99%+

SLA adherence

40–60%

less operational effort

As cloud, data, and AI workloads scale, organizations face growing operational complexity, cost volatility, and governance risks. Impetus' agent-driven DataOps services powered by Prism™, a unified observability control plane, delivers measurable gains in cost efficiency, reliability, and operational agility.

From fragmented firefighting to unified, scalable, autonomous operations

With traditional DataOps

- Limited visibility across platforms
- Governance gaps and security risks
- Slow, manual optimization
- Frequent data outages
- Poor data observability
- Multiple, outdated dashboards
- Inability to handle GenAI workloads
- Runaway cloud costs

With agentic AI-driven DataOps

- 360-degree visibility across cloud and data platforms
- Governance and security enforced by design
- Automated cost and performance tuning
- Self-healing operations with SLA assurance
- End-to-end, unified observability across pipelines
- Single pane of truth with real-time insights
- Fully AI-ready, scalable workloads
- Built-in FinOps with cost guardrails

Reimagine DataOps with specialized AI agents and next-gen observability

Discover

Evaluate cost, performance & platform health

Optimize

Tune workloads, optimize infrastructure

Automate

Drive autonomous CI/CD, governance & remediation

Operate

Control costs, accelerate releases, enhance resilience

Scale

Enable predictive operations at enterprise-scale

End-to-end solution for operational excellence and AI success

Assessment & Discovery

- Identify cost & performance bottlenecks, governance gaps, etc.
- Unify observability across cloud and data platforms.
- Detect and optimize expensive queries with SQL Maestro™.

Continuous Modernization

- Tap specialized AI agents for cloud provisioning, job analysis, SRE monitoring, anomaly detection, RCA, remediation, debugging, and more.
- Automate pipeline refactoring and workload tuning with CI/CD optimization.
- Use an NL-powered interface for data analysis and troubleshooting.

Day 2 Assurance

- SLA-backed, managed DataOps services.
- Governance enforcement for GenAI and agentic workloads.
- 12-month performance warranty for post-migration stabilization.

Certainty Delivered™ at scale

400% faster incident resolution
for a Fortune 100 payment card company

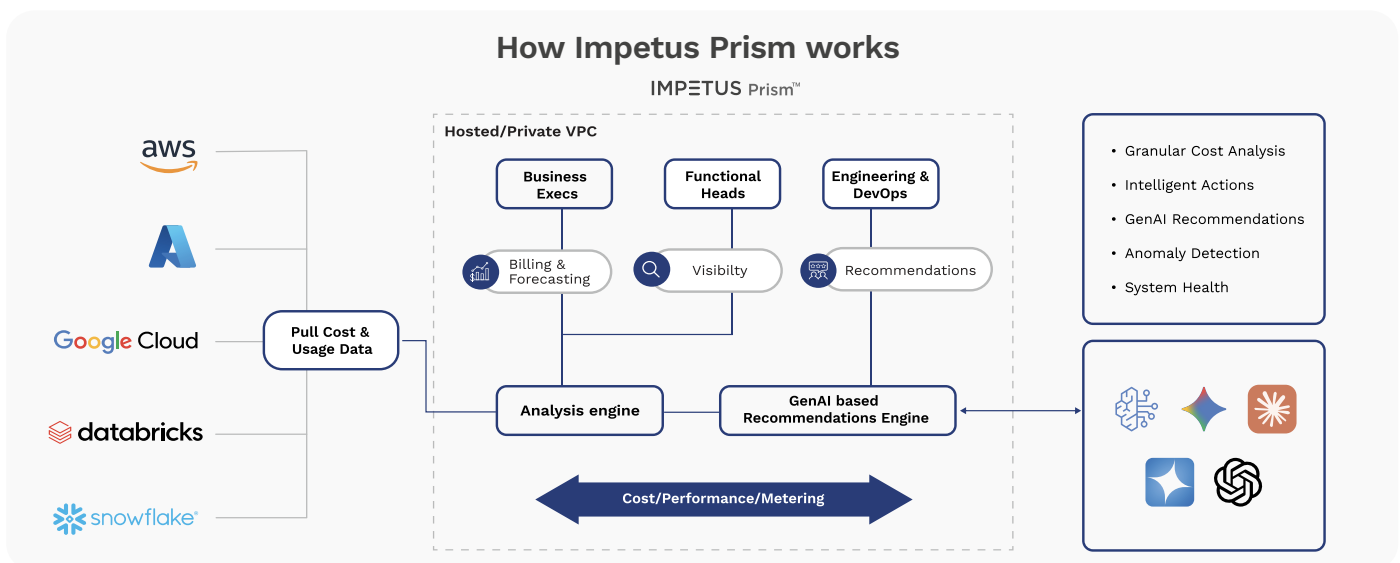

130+ AI business use cases enabled
for a Fortune 100 airline

800+ new customer wins
for a Fortune 200 insurance & risk leader

75% faster processing
for a US cosmetic retail chain

The Impetus Prism advantage

Get unified visibility across leading cloud and data platforms for smarter, safer, resilient operations.

About Impetus Technologies

Impetus Technologies enables the Intelligent Enterprise™ with advanced data engineering and innovative software-led Agentic AI industry services and solutions. Backed by deep engineering expertise, strong strategic technology partnerships, and a culture of innovation, Impetus drives growth, efficiency, and competitive advantage for leading organizations worldwide.
